In this CSA, the client sends request to a server, and the server process the request & sends the response back

Banking application

Working process of an application.

presentation layer — Bussiness layer — database layer.

uses interacts on

frontend.
* HtMl
* css
* javascript
* React
* Angular

Ex: website & mobile app's buttons

MiddleWare
* C
* C++
* Java
* python

process user request (contains bussiness rules & logic.
Ex: checking username/password

Backend. stores & retrieve the application data
* SQL
* SQL+
* My SQL
* Oracle SQL.

DATA

Data is a raw facts which describes a properties of an collection of raw-facts & information

objects

properties are also known as attributes.

objects are also known values / entity.

The combination of property of an object is known as
